Dear Robert,

I'm happy to respond to your request for an evaluation of the work you did for me.

I want to make a small renovation in my all-concrete home. This requires a Building Permit in my case.

An Engineer/Architect is required to evaluate existing structure and plan for the modification. Engineering drawings which detail the work to be done are required.

In making random calls to Architects/Engineers, your previous employer gave you a very high recommendation.

You promptly responded and finished the evaluation/recommendation plan in a very orderly, professional engineering manner. You presented me with the finished drawings in just a couple of days, in half the estimated time.

Your stamped drawings were readily accepted by the Building Department of Martin County, FL. My permit was issued without delay.

I am a graduate mechanical engineer (B.S.M.E.) but not a Professional Engineer, so I could not provide "stamped" plans.

I can, however, give you a very high recommendation based on the performance of your work. Thank you.

Very truly yours, Don Onofrio
